Smart savings for business

Planning an upcoming project? We're here to help and keep you safe

As the situation with COVID-19 continues to evolve day by day, we're committed to the safety of our customers and to our staff.

In-person consultations have now resumed. However, you may still choose a virtual consultation online or by phone if preferred.

To keep you safe during on-site visits, our Energy Solutions Advisors will practice physical distancing, wear protective personal equipment including face masks and take sanitization precautions. If you feel unwell, you can easily cancel/re-book your consultation at short notice.

Your advisor would be pleased to review your site's specific safety requirements prior to any in-person consultation. Simply contact us in advance to discuss.

If you have questions or to book a consultation, you can [contact an advisor online](#) or send an email directly to energyservices@enbridge.com.

Boiler system efficiency is much more complex than you might think

This whole-system approach can help you cut energy and maintenance costs.

Without proper system design, your boiler can waste energy and can add up to significant operational costs.

These top tips can help:

- **Match boiler system to your building's needs**

Boilers often have greater capacity than what's needed, which can result in more energy—and money—used. Right-size your boiler to reduce costs and keep it lasting longer.

- **High efficiency pays**

As high-efficiency and condensing boilers are up to 98 percent efficient, upgrading your standard boiler can significantly reduce energy costs.

- **Insulate to prevent heat loss**

Inspect, repair and add insulation around pipes, valves, traps and drum ends to keep more heat in.

- **Inspect and replace steam traps**

Optimizing your condensate system starts with replacing your failed traps. At the same time, check if a high-pressure return system is right for you.

Get 2X the incentives for boiler system upgrades

Whether you manage a building on campus or a multi-residential building, Enbridge Gas' Energy Solutions Advisors can help you improve your boiler system's performance. Get expert advice and 2X the incentives when you submit your project by July 31, 2020—now 0.40/m³ for natural gas saved.

Contact us to schedule a consultation and get your boiler project underway.

Why your next call should be to an Energy Solutions Advisor

Contact our team for advice on reducing energy and operating costs.

Looking for savings but unsure about what's involved? We've helped thousands of Ontario businesses launch cost-saving energy-efficiency projects with incentives and expert help along the way. Here's what we've heard:

“Energy efficiency isn’t a priority.”

Utilities can be a significant operating expense, but they’re not a fixed cost. With proper energy management, our team can help make systems and equipment more efficient and reduce costs year after year.

“I don’t have time.”

With Energy Solutions Advisors across Ontario specializing in different sectors, it’s quick and easy to set up a free consultation at your convenience. An energy expert will help you better understand your business and your building—and help uncover ways to reduce your operating budget.

“Planning takes too much paperwork.”

Our Energy Solutions Advisors take care of everything—even the paperwork to apply for the incentives. We’ll evaluate your site, looking at energy-intensive equipment, and make recommendations on projects and equipment upgrades that may qualify for incentives.

“Our systems and equipment don’t need replacing.”

Although equipment might be working now, improving the energy efficiency of key systems and equipment can help avoid costly repairs down the road. With more efficient operations, there’s less wear-and-tear on equipment, which extends its useful life and reduces maintenance costs.

“I can’t secure capital right now.”

Some energy-efficiency projects, like fine-tuning systems or other operational improvements, can be completed quickly, with little to no investment. For more intensive projects, our Energy Solutions Advisors can help you build a strong business case, by calculating return-on-investment with incentives.
