

## ENVIRONMENTAL IMPLEMENTATION PLAN

1. Construction will be conducted in accordance with Enbridge Gas Distributions Inc.'s ("Enbridge") Construction and Maintenance Manual and the recommendations in the Environmental Report entitled "*Enbridge Gas Distribution: Bathurst Natural Gas Pipeline Project*" dated June, 2018.
2. The Environmental Implementation Plan will incorporate recommended mitigation measures for the environmental issues associated with the proposed works and will be communicated to the construction contractor prior to the start of construction. A qualified Environmental Advisor will be available to assist the Project Manager in ensuring that mitigation identified in the Environmental Report, permitting requirements and environmental conditions contained in the Ontario Energy Board's Conditions of Approval are followed and that commitments made to the public, landowners, and agencies are honoured. The Environmental Advisor and Project Manager will also ensure that any unforeseen environmental circumstances that arise before, during or after construction are appropriately addressed.
3. Mitigation measures have been developed to address environmental and socio-economic features found along the Preferred Route. These include but are not limited to:
  - Species at Risk and wildlife habitat;
  - Archaeological and heritage resources
  - Vehicular travel along the route; and
  - Potentially contaminated lands.

4. A Summary of the Potential Effects and Recommended Mitigation and Protective Measures can be found in Section 6.0, Table 12 of the Environmental Report found at Exhibit C, Tab 1, Schedule 3, Attachment 1.
5. Additional mitigation measures for Species at Risk (“SAR”) in the area may be developed based on ongoing conversations with the Ministry of Natural Resources and Forestry (“MNR”) and will be determined prior to construction.
6. Through the use of the procedures found within the Environmental Report and additional mitigation measures provided by the MNR (as required), it is expected that environmental impacts resulting from construction of the Bathurst Natural Gas Pipeline Project will not be significant.
