

ENVIRONMENTAL REPORT

1. Stantec Consulting Ltd. (“Stantec”) was retained by Enbridge Gas Inc. (“Enbridge”) to undertake a route evaluation and environmental and socio-economic impact study, which included a cumulative effects assessment, to select the Preferred Route for the proposed Georgian Sands pipeline to minimize potential environmental and socio-economic impacts that the project could have on the environment.
2. Mitigation measures designed to minimize environmental and community impacts were developed as part of the study. The study results have been documented in the Environmental Report (“ER”) included in this exhibit. The ER conforms to the Ontario Energy Board *“Environmental Guidelines for the Location, Construction and Operation of Hydrocarbon Pipelines and Facilities in Ontario”* (7th Edition, 2016).
3. The ER is included as Attachment 1 to this Exhibit and has been filed under separate cover due to the size of the report.
4. For ease of reference, the ER by Stantec can be found on the Enbridge website by selecting the Georgian Sands project listed under the Projects Tab at the following link: <https://www.enbridgegas.com/en/About-Us>
5. The ER was submitted to the Ontario Pipeline Coordinating Committee (“OPCC”) on December 4th, 2018.
6. At the time of submission of this Application, no comments have been received from the OPCC regarding content of the Environmental Report. Enbridge will update the Ontario Energy Board regarding the OPCC review process of the ER should further information become available.
