

ENVIRONMENTAL IMPLEMENTATION PLAN

1. Construction will be conducted in accordance with Enbridge Gas Distributions Inc.'s ("Enbridge") Construction and Maintenance Manual and the recommendations in the Environmental Report ("ER") titled "*Enbridge Gas Distribution: Proposed Liberty Village Pipeline Project*" dated April, 2018.
2. The Environmental Implementation Plan will incorporate recommended mitigation measures for the environmental issues associated with the proposed works and will be communicated to the construction contractor prior to the start of construction. A qualified Environmental Advisor will be available to assist the Project Manager in ensuring that mitigation identified in the ER, permitting requirements and environmental conditions contained in the Ontario Energy Board's Conditions of Approval are followed and that commitments made to the public, landowners, and agencies are honoured. The Environmental Advisor and Project Manager will also ensure that any unforeseen environmental circumstances that arise before, during or after construction are appropriately addressed.
3. Mitigation measures have been developed to address environmental and socio-economic features found along the Preferred Route. These include but are not limited to:
 - Pedestrian and vehicular traffic,
 - Archaeological and heritage resources; and
 - Potentially contaminated lands.
4. A summary of the potential effects and recommended mitigation and protective measures can be found in Sections 3.0 to 5.0 of the ER at Exhibit C, Tab 1, Schedule 3, Attachment 1.

5. Through consultation with the Ministry of Natural Resources and Forestry (“MNR”), no Species at Risk (“SAR”) in the area have been identified. No additional mitigation measures were provided by the MNR.

6. Through the use of the procedures found within the ER, it is expected that environmental impacts resulting from construction of the Liberty Village Pipeline Project will not be significant.
