

PROPOSED LIBERTY VILLAGE NATURAL GAS PIPELINE PROJECT

NOTICE OF STUDY COMMENCEMENT AND PUBLIC OPEN HOUSE

LIBERTY VILLAGE, TORONTO, ON

ENBRIDGE GAS DISTRIBUTION INC.

Study Overview

Enbridge Gas Distribution (Enbridge) has retained GHD Inc. (GHD) to conduct an environmental study to assess the potential impacts of natural gas pipeline construction through Liberty Village. This pipeline, which spans 1.1 km, will deliver essential natural gas to new developments in the area. Once the environmental study is complete, Enbridge will apply to the Ontario Energy Board (OEB) for approval to construct. If approved, construction may begin as early as late summer/fall 2018. The Preliminary Preferred and Alternate Route would be constructed mainly within existing rights-of-way and are identified on the map attached.

Preliminary Preferred Route - Section 1

The preliminary preferred route includes 900m of 8-inch pipe beginning at King St. W and Jefferson Ave. It heads east along King St. before being directed south onto Atlantic Ave. where it continues east along

Snooker St. It then turns onto Hanna Ave. and continues south toward East Liberty St. Finally, it continues east along East Liberty St. and connects with the existing gas main at Pirandello St.

Alternate Route - Section 1

The alternate route includes 870m of 8-inch pipe, beginning at King St. W and Jefferson Ave. It heads east along King St. before being directed south onto Atlantic Ave., continuing east along Snooker St., through the Metro grocery plaza, and along the laneway connecting to East Liberty St. Finally, it continues east along East Liberty St. and connects with the existing gas main at Pirandello St.

Section 2

Section 2 of the pipeline is identical for both route options and includes 200m of 6-inch pipe beginning at Strachan Ave. and Ordance St., continuing east, before heading south where it concludes.

The Process and Public Open House

As Liberty Village continues to grow, natural gas is required to service new developments. The environmental study will assess the surrounding area along the pipeline route and evaluate these routes from an environmental and socio-economic perspective and will identify ways to avoid or mitigate any potential impacts on the surrounding area. This study is being conducted in accordance with the OEB's Environmental Guidelines for the Location, Construction, and Operation of Hydrocarbon Pipelines and Facilities in Ontario.

Stakeholder consultation is an important part of this study. Members of the public, regulatory agencies, Indigenous communities and other stakeholders are invited to attend the Public Open House to review the project and provide comments. Stakeholder input will be considered in the development of the mitigation measures that will be implemented during construction and will be included as part of the final Record of Consultation. Representatives from Enbridge and GHD will be present at the Public Open House to discuss the project and answer your questions.

If you have any questions, please feel free to contact us.
