ENBRIDGE GAS INC.

Answer to Interrogatory from
Industrial Gas Users Association (IGUA)

Interrogatory

Reference:

Exhibit 4, Tab 5, Schedule 1, Attachment 1, Section 7, pages 7-20 and 7-21.

Preamble:

The IGUA observes that several of the accounts have a high negative salvage percentage relative to the applied for net salvage rate. As an example, Accounts 473.01 and 473.02 have observed negative net salvage rates of -69.02% and -167.51%, respectively. Concentric has recommended a -32% and -26% net salvage rate for these accounts, respectively.

Question(s):

- a) Please reconcile the recommended net salvage rates with the observed net salvage rates for each of the accounts studied by Concentric, and explain the reason for the selected net salvage rates. Please separately detail any adjustments to the salvage rates caused by the CDNS method and any other judgment applied by Concentric in the selection of the salvage rate that is not already provided in Section 3, if any.
- b) Please confirm that if Concentric were to apply the net salvage rates included at pages 7-20 and 7-21 for the above referenced accounts, that the calculated net salvage costs would increase significantly. If not confirmed, please explain.
- c) Having regard to the magnitude of some of the negative net salvage rates calculated by Concentric using historical data, please comment on the potential size of any unfunded net salvage liability that may exist if there is an understatement in the amount of forecast net salvage costs that will ultimately be incurred. If Concentric can quantify the potential size of the unfunded salvage costs, please provide that amount including support for the calculation.

Response:

The following responses were provided by Concentric Energy Advisors, Inc.:

- a) All net salvage estimates were adjusted through the use of the CDNS calculations. These calculations have been provided at Exhibit I.4.5-IGUA-14 part a).

Account 452 relates to Underground Storage Structures and Improvements. This account has a historical net salvage indication relating to transaction from 2011 through 2021 of negative 6. The most recent 3-year bands indicate negative 10 and negative 15 percent, while the most recent 5-year bands indicate negative 8 and negative 11 percent may be appropriate. The currently approved net salvage estimate for this account is negative 10 percent. Based on the historical indications, Concentric recommends a net salvage estimate of negative 15 percent be used in this account. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 10 percent.

Account 453 relates to Underground Storage Wells. This account has a historical net salvage indication relating to transactions from 1994 through 2021 of negative 230 percent. Transaction year 2015 contributes almost 24 million of the total 34.6 million dollars in historic cost of removal. As this appears to be an outlier, lesser weighting was placed on this amount. When the 24 million dollars is removed, the historic indication for this account is negative 71 percent. EGD has an approved net salvage estimate of negative 6 percent and Union has an approved estimate of negative 20 percent. Based on the historical indications, Concentric recommends a net salvage estimate of negative 50 percent be used be used in this account. While this is lower than the historical indications, it is a 150% increase from the currently approved estimate. As such, this gradual increase allows for the increase to be moderated while also recognizing the higher than approved historic indications. This estimate of negative 50 percent was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 30 percent.

Account 454 relates to Underground Storage Well Equipment. This account has no historic net salvage data and does not have any approved net salvage. Due to the lack of historical indications, Concentric recommends a net salvage estimate of 0 percent be used for the depreciation calculations for this account.

Account 455 relates to Underground Storage Field Lines. This account has a historical net salvage indication relating to transactions from 1996 of negative 38 percent. EGD has an approved net salvage estimate of negative 6 percent for this account. It is noted that there has not been net salvage recorded in this account since 2016. As such, while Concentric recognizes the need to increase net salvage based on the historical indications, a moderated increase is necessary due to the most recent experience. Concentric recommends a net salvage estimate of negative 15 percent be used in this account. This estimate was adjusted through the use of

the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 8 percent.

Account 456 relates to Underground Storage Compressor Equipment. This account has a historical net salvage indication of negative 16 percent. The last 4 3-year bands all show net salvage ratios greater than negative 20 percent. The 4 most recent 5-year bands all show net salvage ratios of above negative 15 percent. EGD has a currently approved net salvage estimate of negative 6 percent and Union has a currently approved net salvage estimate of negative 5 percent. While the historical data indicates that a more negative net salvage estimate may be appropriate, in the interest of moderation, Concentric recommends a gradual increase in the net salvage estimate to negative 10 percent. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative six percent.

Account 457 relates to Underground Storage Regulating and Measuring Equipment. This account has a historical net salvage indication of negative 36 percent. EGD has a currently approved net salvage estimate of negative 6 percent and Union has a currently approved net salvage estimate of negative 10 percent. The 5 most recent 3- and 5-year bands all indicate a net salvage estimate in excess of negative 20 percent, up to negative 100 percent, may be appropriate. However, in the interest of gradualism and moderation, Concentric recommends a net salvage estimate of negative 20 percent be used in this study. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 14 percent.

Account 462 relates to Transmission Compressor Structures and Improvements. This account has a historical net salvage indication of negative 33 percent. Union has a currently approved net salvage estimate of negative 10 percent, and peer utilities have net salvage estimates of negative 3 percent. While the historical data indicates that a net salvage estimate of up to negative 30 percent may be appropriate, Concentric recognizes the indications provided by peer utilities of an estimate much lower. As such, Concentric recommends maintaining the currently approved negative 10 percent at this time. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 5 percent.

Account 463 relates to Transmission Measuring and Regulating Structures and Improvements. This account has a historical net salvage indication of negative 26 percent. Peer utilities have net salvage estimates of negative 15 percent. While the historical data indicates that a net salvage estimate of up to negative 25 percent may be appropriate, Concentric recognizes the indications provided by peer utilities of an estimate much lower. As such, Concentric recommends the gradual increase to negative 10 percent at this time. This estimate was adjusted through the use of the

CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 6 percent.

Account 464 relates to Transmission Equipment. This account has a historical net salvage indication of negative 179 percent, however this is based on a limited data set including less than 10 thousand dollars in retirements. While the historical data indicates that a net salvage estimate of up to negative 100 percent may be appropriate, Concentric recognizes that this is based on a limited dataset. As such, Concentric recommends the gradual increase to negative 10 percent at this time. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 5 percent.

Account 465 relates to Transmission Mains. This account has a historical net salvage indication of negative 83 percent. Union has a currently approved net salvage estimate of negative 15 percent, and peer utilities show indications that a net salvage estimate between negative 20 and negative 30 may be appropriate. While the historical data indicates that a net salvage estimate of up to negative 80 percent may be appropriate, Concentric recognizes the indications provided by peer utilities of an estimate much lower. As such, Concentric recommends the gradual increase to negative 25 percent at this time. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 12 percent.

Account 466 relates to Transmission Compressor Equipment. This account has a historical net salvage indication of negative 28 percent. Union has a currently approved net salvage estimate of negative 5 percent, and peer utilities show indications that a net salvage estimate between negative 2 and negative 3 may be appropriate. While the historical data indicates that a net salvage estimate of up to negative 25 percent may be appropriate, Concentric recognizes the indications provided by peer utilities of a much lower estimate. As such, Concentric recommends the gradual increase to negative 10 percent at this time. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 7 percent.

Account 467 relates to Transmission Measuring and Regulating Equipment. This account has a historical net salvage indication of negative 47 percent. Union has a currently approved net salvage estimate of negative 10 percent, and peer utilities show indications that a net salvage estimate between negative 5 and negative 75 may be appropriate. While the historical data indicates that a net salvage estimate of up to negative 45 percent may be appropriate, Concentric recognizes that this would have significant impact on the depreciation expense. As such, Concentric recommends the gradual increase to negative 25 percent at this time. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 15 percent.

Account 472 relates to Distribution Structures and Improvements. This account has a historical net salvage indication of negative 6 percent. EGD has a currently approved net salvage estimate of negative 20 percent, and peer utilities show indications that a net salvage estimate between negative 10 and negative 65 may be appropriate. While the peer utilities indicate that a net salvage estimate of up to negative 65 percent may be appropriate, Concentric recognizes the much lower indications from the historical data. As such, Concentric recommends not collecting net salvage for Distribution Buildings at this time.

Account 473.01 relates to Distribution Metal Services. This account has a historical net salvage indication of negative 69 percent. Union has a currently approved net salvage estimate of negative 60 percent, and EGD has a currently approved net salvage estimate of negative 22 percent. Peer utilities show indications that a net salvage estimate between negative 60 percent and negative 125 percent may be appropriate. While the historical data indicates that a net salvage estimate of up to negative 70 percent may be appropriate, Concentric recognizes that this would have significant impact on the depreciation expense. As such, Concentric recommends the use of negative 50 percent at this time to recognize the currently approved estimate of EGD. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 32 percent.

Account 473.02 relates to Distribution Metal Services. This account has a historical net salvage indication of negative 168 percent. Union has a currently approved net salvage estimate of negative 40 percent, and EGD has a currently approved net salvage estimate of negative 22 percent. Peer utilities show indications that a net salvage estimate between negative 60 percent and negative 125 percent may be appropriate. While the historical data indicates that a net salvage estimate of up to negative 165 percent may be appropriate, Concentric recognizes that this would have significant impact on the depreciation expense. As such, Concentric recommends the gradual increase to negative 50 percent at this time. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 26 percent.

Account 475.21 relates to Distribution Coated and Wrapped Mains. This account has a historical net salvage indication of negative 53 percent, however that is largely influenced by large retirements in 2019 and 2021. While these retirements are important to consider, Concentric has placed lesser weighting on them as they are out of the scope of typical retirement amounts. Union has a currently approved net salvage estimate of negative 60 percent, and EGD has a currently approved net salvage estimate of negative 51 percent. Peer utilities show indications that a net salvage estimate between negative 25 percent and negative 90 percent may be appropriate. Concentric recommends a net salvage estimate of negative 80 percent

to recognize the long term trend in the historical data. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 42 percent.

Account 475.30 relates to Distribution Plastic Mains. This account has a historical net salvage indication of negative 23 percent, however that is largely influenced by large retirements in 2021. While these retirements are important to consider, Concentric has placed lesser weighting on them as they are out of the scope of typical retirement amounts. Union has a currently approved net salvage estimate of negative 40 percent, and EGD has a currently approved net salvage estimate of negative 38 percent. Peer utilities show indications that a net salvage estimate between negative 38 percent and negative 90 percent may be appropriate. Concentric recommends a net salvage estimate of negative 80 percent to recognize the long term trend in the historical data. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 38 percent.

Account 477 relates to Distribution Measuring and Regulating Equipment. This account has a historical net salvage indication of negative 25 percent, however that is largely influenced by large retirements in 2021. While these retirements are important to consider, Concentric has placed lesser weighting on them as they are out of the scope of typical retirement amounts. Union has a currently approved net salvage estimate of negative 50 percent, and EGD has a currently approved net salvage estimate of negative three percent. Peer utilities show indications that a net salvage estimate between negative seven percent and negative 30 percent may be appropriate. Concentric recommends a net salvage estimate of negative 15 percent as a gradual increase for EGD while recognizing the long term trend in the historical data. This estimate was adjusted through the use of the CDNS method to result in a net salvage estimate to be used in the depreciation calculations of negative 9 percent.

Concentric has not recommended a net salvage estimate for the remaining accounts.

- b) Confirmed.
- c) Net salvage estimates are related to expenses that are expected to be incurred many years into the future. While the historic indications are an important component in estimating what the future cost of removal requirement will be, it is impossible to be certain if the future cost of removal amounts will be comparable to those in the past. As such, while Concentric relies heavily on the historical indications of net salvage, care is taken to ensure that the trends within this data are analyzed properly. Further, Concentric recommends the use of gradualism and moderation when selecting net salvage estimates to ensure that indications of much

more negative net salvage are long standing before making changes. This allows time to make adjustments as data is gathered and ensures generational equity between toll payers today and those of the future.

While it is true that some accounts show indications of much more negative net salvage than has been requested in this study, Concentric has balanced the need for stable depreciation expense today with the risk of underfunded net salvage liability in the future. In doing so, Concentric has minimized the risk to future toll payers through requests for more negative net salvage estimates in accounts where it is deemed appropriate.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Industrial Gas Users Association (IGUA)

Interrogatory

Reference:

Exhibit 4, Tab 5, Schedule 1, Attachment 1, Section 8.

Preamble:

To confirm certain of Concentric's calculations and develop alternative estimates of depreciation expense requires the information provided in Section 8 in an Excel format.

Question(s):

- a) Please provide the information included in Section 8 for each account within a working Excel spreadsheet, with a separate tab for each account. Where possible, please leave in place all calculations that can be performed using the data included. (For example, the accumulated depreciation factor of 0.45 on Page 8-3 is calculated simply by taking the allocated actual booked amount divided by the original cost, the composite annual accrual rate of 1.69% is calculated by dividing the annual accrual by the original cost, etc.)
- b) If a specific amount cannot be calculated using the information in Section 8, please explain how Concentric derived the amount and provide the source of the information necessary to replicate the calculations.

Response:

The following response has been provided by Concentric:

- a) The detailed depreciation calculations provided in Section 8 of the Concentric report are directly output in a PDF format from the proprietorial and copyrighted software package used by Concentric.

Attachment 1 to this response provides an Excel spreadsheet which contains the data set out in Section 8.

/u

- b) Please see response at part a).

Answer to Interrogatory from
Industrial Gas Users Association (IGUA)

Interrogatory

Reference:

Exhibit 4, Tab 5, Schedule 1, Attachments 2 and 3.

Preamble:

Some of the information contained in the Excel versions of Attachments 2 and 3 is hard coded. It would be of benefit to have similar information from different perspectives, including with net salvage and other adjustments separately identified. Attempts to insert formulas to calculate the amounts included in the above attachments but observed some unexplained differences. For example, when calculating the provision in Attachment 2 using proposed rates, there are consistently differences.

Question(s):

- a) Please refile copies of both attachments with working formulas and if any changes or errors exist, please identify those amounts. Additionally, if the hard coded information is derived in some other manner, please isolate the differences and explain how the amounts are calculated. For example, if the difference relates to the amortization of reserve differences, please show this amount as a further separate adjustment and calculation in the Excel file. For Attachment 3, please include the account number with each calculation.
- b) Please expand Attachment 2 to break out the current and proposed rates by the depreciation (i.e., life component) and net salvage components, and provide the differences by account for each component. If any other amortization of reserve differences exists, please also separately break out those amounts.
- c) Please revise Attachment 2 to calculate the proposed rates using the ALG procedure, providing all supporting calculations, with the current and proposed rates broken down by depreciation (i.e. life component) and net salvage components. Please use the curves as applied for but applying the ALG procedure rather than the ELG procedure.

Response:

- a) We are unable to introduce formulas into Exhibit 4, Tab 5, Schedule 1, Attachments 1 and 2 since both attachments are simplified schedules combining depreciation for both EGD and Union from more complex models. These schedules used a simple average (opening and closing plant balance) for each account and therefore would not produce the exact number when performing a quick calculation. The detailed models supporting the 2024 depreciation using proposed rates are provided, by rate zone, at Attachments 1 and 2.
- b) Please see Attachment 3 which includes an expanded version of the table including a breakout of the current and proposed rates by the depreciation and net salvage components, and differences by account for each component.
- c) Please see Attachment 4 which includes a revised version of Exhibit 4, Tab 5, Schedule 1, Attachment 2 to include current and proposed rates broken down by depreciation and net salvage components applying the ALG procedure rather than the ELG procedure. The detailed models supporting the 2024 depreciation using ALG rates are provided, by rate zone, at Attachment 5 and 6.

Capex to Plant Account Assumptions

General Plant Allocator	3.04%
-------------------------	-------

Allocates forecasted capex by asset class into the plant accounts

Allocates forecasted IDC capex by asset class into the plant accounts
 Note - Separate Corporate allocation calc required because Corporate AC has historically all been allocated to OH plant accounts, whereas IDC is required to be spread across all plant accounts

Notes:

- (1) A simple average of the opening and closing plant balances was used.
- (2) Provision - Current Rate represents depreciation on 2024 plant balances excluding all harmonization and depreciation study changes
- (3) Placeholder to be replaced with actual plant accounts once assets are unitized. Represents forecasted RNG projects in total using a blended rate of assets.
- (4) Previously account 474.01 for Union.
- (*) Depreciation rate for current provision uses equivalent Distribution Plant account.
- (**) Depreciation rate for current provision uses 473 Services.

Notes:

- (1) A simple average of the opening and closing plant balances was used.
- (2) Provision - Current Rate represents depreciation on 2024 plant balances excluding all harmonization and depreciation study changes
- (3) Placeholder to be replaced with actual plant accounts once assets are unitized. Represents forecasted RNG projects in total using a blended rate of assets.
- (4) Previously account 474.01 for Union.
- (*) Depreciation rate for current provision uses equivalent Distribution Plant account.
- (**) Depreciation rate for current provision uses 473 Services.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Industrial Gas Users Association (IGUA)

Interrogatory

Reference:

Exhibit 4, Tab 5, Schedule 1, Attachment 1, page 3-14.

Preamble:

Concentric frequently refers to a peer analysis that it has completed for both lives and net salvage rates, but the analysis does not appear to be filed.

Question(s):

- a) Please provide a copy of the peer analysis in a working Excel file for both lives and net salvage or refer to where the information is included in the record for each account studied.
- b) If the peer analysis is not included in the Concentric report, please fully explain why the evidence was not included as part of the original filing. For example, if not filed, does Concentric consider the peer analysis to be of less relevance or weight to Concentric's conclusions and recommendations? Please explain.
- c) Please explain in detail why each of the peers included in Concentric's analysis are relevant peers that should be compared to the EGI assets. Similarly, if any possible peers in the Canadian utility industry were excluded, please fully explain why this was the case.
- d) For each of the companies included in the peer analysis, please also provide a separate table showing the life or net salvage rate recommended by Concentric for the peer, if Concentric performed the depreciation and net salvage study.

Response:

The following responses were prepared by Concentric:

- a) Please see Attachment 1 for the peer analysis in a working Excel file for both lives and net salvage.

- b) As the results of the peer analysis are included in each relevant account write-up in the filed report, Concentric does not believe that there should be less weight placed on the analysis even though the tables were not filed. The peer analysis for both life and salvage are one of the many factors considered by Concentric for the recommendations for each account studied. The other factors include:
- Data available from the client;
 - Common Regulatory Practice within the client jurisdiction;
 - The historic practice and company policies of the client;
 - Prior directions from the client's regulatory authority;
 - The evaluation of the recent changes in the depreciation practice implemented for a specific utility.
- c) All of the peers included in Concentric's analysis include Canadian gas distribution and transmission companies. These are included as their assets share similar attributes with Enbridge Gas's, such as climate and government policies.
- d) Please see Attachment 2 for the list of recommendations for the peer companies whose study was completed by Mr. Kennedy. Mr. Kennedy was employed by Gannett Fleming until April 2017, and any studies completed after April 2017 were done by Concentric.

Answer to Interrogatory from
London Property Management Association (LPMA)

Interrogatory

Reference:

Exhibit 4, Tab 5, Sch. 1, Att. 3

Question(s):

Please provide a version of the schedule at pages 26 through 28 for 2024 that reflects the corrections noted in the January 27, 2023 letter and adds two columns that show the truncated rate and the truncated provision using a 2050 economic planning horizon as detailed in Appendix 1 to Exhibit 4, Tab 5, Schedule 1, Attachment 1.

Response:

Please see Attachment 1 which includes the updates reflected in Exhibit 4, Tab 5, Schedule 1, Attachment 3, updated March 8, 2023.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Greenhouse Vegetable Growers (OGVG)

Interrogatory

Reference:

Exhibit 4, Tab 5, Schedule 1, Attachment 1, Page 19
Exhibit 1 Tab 10 Schedule 4 Page 18

Question(s):

Concentric has attached Appendix 1 that shows the depreciation rate calculations using the same recommended depreciation parameters as the current study, with the introduction of a 2050 EPH [economic planning horizon]. While Concentric is not recommending this move at this time, the calculations are provided as an example of what would be expected if a 2050 EPH were approved.

EGI estimates the impact of the theoretical EPH relative to the applied for depreciation expense of \$921.4M to be an additional \$282M in 2024.

- a) Please describe how the level of depreciation expense would be impacted in the years following 2024 assuming an EPH of 2050 were to remain in place. If feasible, please estimate the annual depreciation expense using the 2050 EPH for the 2024 to 2028 period based on EGI's proposed capital spending as set out in Exhibit 2 Tab 6 Schedule 1 Page 36 (as updated).
- b) Please break out the estimated \$282M impact of the theoretical EPH into storage, transmission, and Distribution related impacts.
- c) Please comment on the feasibility of, instead of implementing an EPH, increasing EGI's depreciation rates by a fixed amount, either across all assets or across specific asset types (for example, a scenario where the depreciation rates applied to all distribution assets were to be increased by 10%) as a measure to mitigate against the risk of future stranded asset value. Please describe the impact such increases would have (for example, does a 10% increase in a depreciation rate correlate to a linear 10% increase in depreciation cost for the affected asset class?).

Response:

- a) The impact of applying rates with a 2050 EPH has been updated to approximately \$290 million, please see Exhibit 1, Tab 10, Schedule 4, page 18, updated March 8, 2023. Please see Table 1 for the estimated depreciation expense for the 2024 to 2026 forecast. Enbridge Gas is unable to provide the estimate including rate base additions from 2027 to 2028 due to the forecasting horizon used for planning purposes. The forecasts for 2025 and 2026 do not include the changes to depreciation expense reflected in the March 8, 2023 update. Please see response at Exhibit I.1.2-SEC-6.

Table 1
Estimated Depreciation Expense

\$ Billions	2024	2025	2026
EGI Depreciation – 2050 EPH	\$1.2	\$1.3	\$1.3

- b) Please see the breakdown below for the estimated impacts of the updated \$290 million, by the categories of storage, transmission and distribution assets by applying the 2050 EPH rates:
- Distribution impact is estimated at \$232 million
 - Transmission impact is estimated at \$48 million
 - Storage impact is estimated at \$10 million
- c) The following response was provided by Concentric Energy Advisors, Inc.:

Depreciation rates are primarily driven by a number of factors – the average service life estimate, the lowa curve chosen, the net salvage estimate, the age of the assets and the depreciation procedure used. There is not the ability within accepted depreciation methods to simply increase rates by a set percentage. Between the time of the depreciation study and the expected end of life due to economic factors, there is the expectation that assets will continue to retire due to other forces of retirement – roads moves will continue to occur, as will preventative replacement of mains and services, for example. Changing any of the depreciation parameters (average service life, lowa curve, or net salvage estimates) will impact the ability to match the expected lives of these interim retirements with the life of the account as a whole.

Due to the above, the only ways to impact the depreciation rate without changing the depreciation parameters are to change the depreciation procedure (Average Life Group versus Equal Life Group for example) or to include the use of an economic planning horizon. The choice of Equal Life Group as a depreciation method allows for the same total depreciation expense to be collected over the life of the assets as

under Average Life Group while also ensuring that the depreciation expense is properly collected from the tollpayers using the assets today. However, the use of an economic planning horizon remains the best solution to ensure all assets are properly recovered over the useful life of the account.

If Enbridge Gas were to institute a broad increase in depreciation expense of 10%, there are a couple of ways that this increase could be calculated. For example, it would be possible to decrease the average service life estimates to all accounts by 10%. This would not have a linear relationship with the final depreciation rates as the position of the calculated accumulated depreciation accounts would impact the total depreciation rates. If the OEB were to simply order an increase in the depreciation rates of 10% for each account, that would have a linear impact on the total depreciation expense collected. If the OEB were to order this increase in depreciation expense, Concentric would recommend the use of a rate rider or other mechanism to recover this cost with the collected amount going into the accumulated depreciation reserve. This would allow the correct interim retirements and depreciation expense to be collected while also increasing the total depreciation expense. However, Concentric notes that the best method of collecting for uncertainty in the future is the use of an economic planning horizon.

Answer to Interrogatory from
Ontario Greenhouse Vegetable Growers (OGVG)

Interrogatory

Reference:

Exhibit 4 Tab 5 Schedule 1 Attachment 2 Page 8
Exhibit 6 Tab 1 Schedule 2 Attachment 2 Page 2

Question(s):

The new depreciation study is cited as contributing to a 168.9M increase in depreciation in Exhibit 4; in Exhibit 6 the new depreciation study is cited as contributing to a 198M increase in depreciation.

- a) Please reconcile the two different depreciation study impacts on the 2024 revenue requirement, cited as 168.9M in Exhibit 4 and 198M in Exhibit 6; when doing so please account for any updates to the 2024 depreciation expense.

Response:

- a) The amount of \$168.9 million has been updated to \$120.7 million, as shown in Exhibit 4, Tab 5, Schedule 1, Attachment 2, page 8, updated March 8, 2023. This amount represents the calculated difference in the depreciation expense when comparing the current rates to the proposed rates.

The amount of \$198 million has been updated to \$160.4 million, as provided at Exhibit 6, Tab 1, Schedule 2, Attachment 2, page 2, updated March 8, 2023. This amount represents the revenue requirement impact resulting from the implementation of the proposed depreciation study. Please see response at Exhibit I.6.1-SEC-206, Table 5 for a calculation of this amount. The difference between the two amounts represents taxes and the revenue requirement impact of changes in rate base upon the implementation of the proposed depreciation rates.¹

¹ Note there is also a presentation difference of \$0.5 million in depreciation expense between the two referenced exhibits related to the draw-down of investments in RNG lease assets. The \$0.5 million is included in the rate base and depreciation schedules but is not part of depreciation expense for revenue deficiency calculations.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

4-5-1, p.5

Question(s):

SEC seeks to understand the impact of the proposed methodology as compared to the historic EGD and Union methodologies. For each methodology in Table 2, please provide what the 2024 test year depreciation expense would (is forecast to) be, broken down by 'topic'.

Response:

The following response was provided by Concentric Energy Advisors, Inc.

The depreciation expense calculated using the Average Life Group procedure is provided at Exhibit I.2.6-STAFF-173 part e) i. This response includes the ALG expense at the account level, summed to the functional group level, as at December 31, 2021.

The depreciation expense change relating to the change from Generation Arrangement to Equal Life Group is minimal. These calculations can only be carried out in Excel and take an extraordinary amount of time to complete. As such, Concentric has not included these calculations. For an example of the depreciation expense using the Generation Arrangement, please see Exhibit 4, Tab 5, Schedule 1, Attachment 1, Appendix 2.

The move to amortization accounting for certain asset classes will have a minimal impact on the depreciation rates. Both EGD and Union calculated certain asset classes using a Square curve, and this has been continued into the current study. While there is a small change in some of the detailed accounting procedures used by EGD, this will have only a minimal impact on the depreciation rate as a whole.

The change to the CDNS method of net salvage will have the impact of reducing total depreciation expense. Please see Attachment 1 for the depreciation calculations completed without the CDNS method.

ENBRIDGE GAS INC.

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

4-5-1

Question(s):

With respect to Enbridge's consideration of a segregated fund for SRC amounts:

- a) [p.17] Please provide a copy of the referenced Fortis BC Energy application evidence that Enbridge considered. [Note: It is sufficient to simply provide the evidentiary reference and a web link to the document.]
- b) [p.19] Enbridge states that in its view it is in the "best interest of customers not to set up a segregated fund for SRC amounts at this point in time." [emphasis added]. When or under what conditions does Enbridge believe it would be appropriate to set up a segregated fund for SRC?
- c) [p.18-19] Enbridge states: that, "As an example, if the December 31, 2021, SRC liability balance of \$1.5 billion was deposited into a segregated fund, rate base and revenue requirement would increase by \$1.5 billion and \$93 million respectively. The annual increase in revenue requirement thereafter is estimated to be \$3.1 million;" Please provide a detailed calculation that underlines the revenue requirement estimate.
- d) Please provide a copy of all further analysis, memos, research, forecast costs, or similar information that Enbridge undertook regarding the issue.

Response:

- a) The document referenced is the Fortis BC 2012 and 2013 Revenue Requirements and Natural Gas Rates application, pages 95 to 98.
https://docs.bcuc.com/Documents/Arguments/2011/DOC_29217_12-02-2011_FEU-Final-Submission.pdf
- b) Enbridge Gas believes that it would be appropriate to set up a segregated fund for SRC when there is more certainty regarding an expected end of life to utility assets.

Examples of ‘sign posts’ that would trigger the Company to consider introducing a segregated fund include government policy which results in customers disconnecting from the gas network, municipalities or landowners asking for the removal of infrastructure or a determination that significant portions of the gas system have no value.

A fund is not appropriate at this time as Enbridge Gas believes that a diversified pathway which leverages both gas and electricity systems is the best approach to managing the energy needs of the province of Ontario. Under this scenario, it is expected that the utility assets will remain used or useful for the foreseeable future. Setting up a segregated fund at this time would prematurely burden customers with rate increases.

- c) Table 1 illustrates the calculation used to derive the estimates referenced in the evidence:

Table 1
Illustrative Revenue Requirement Impact on SRC Segregated Fund

SRC Balance* **1,500,000,000** * Estimated balance by the end of 2021

Equity	36%	8.34%	45,036,000	Assuming 2021 ROE % at current equity thickness
Debt	64%	3.30%	31,680,000	Average life-to-date rates
Tax		73.50%	16,237,469	Tax gross-up on ROE
Total			92,953,469	Increase in revenue requirement

Annual Impact** **50,000,000** ** 4 year average of SRC net of abandonment costs

Equity	36%	8.34%	1,501,200	Assuming 2021 ROE % at current equity thickness
Debt	64%	3.30%	1,056,000	Average life-to-date rates
Tax		73.50%	541,249	Tax gross-up on ROE
Total			3,098,449	Increase in revenue requirement

- d) In addition to the references provided in part a) and c), Enbridge Gas conducted a peer analysis to determine if any other similar utilities were using segregated funds for SRC. Please see Table 2 and note that none of the utilities researched have implemented segregated funds.

Table 2
Peer Analysis

	EGI	FortisBC	AltaGas	ATCO Gas	Centra Gas	EPCOR
Collects SRC	Yes	Yes	Yes	Yes	No	No
Segregates SRC funds	No	No	No	No	No	No

Enbridge Gas also examined the decision from the CER on the Land Matters Consultation Initiative (LMCI)¹, and publicly filed abandonment trust financial statements. Further, the Company consulted Enbridge Inc. stakeholders involved with CER segregated funds to learn more about their experience.

¹ MH-001-2013, Reasons for Decision, May 2014.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Vulnerable Energy Consumers Coalition (VECC)

Interrogatory

Reference:

Exhibit 4, Tab 5, Schedule 1

Question(s):

- a) Please confirm (or correct) that the incremental increase due to the proposed change in depreciation rates is \$168.9 million. If this is correct it is a significant change of more than 22% in costs. What accounting specific mitigation strategy is EGI proposing to introduce such a large change.
- b) Why should the Board not consider either harmonizing depreciation rates to those used by one of the former utilities or an average where they differ? Specifically address what harm results from a less drastic change to depreciation rates.
- c) If the Board rejects harmonized rates please explain why (or if) depreciation rates should still be harmonized.

Response:

- a) The incremental increase due to the proposed change in depreciation has been updated to \$120.7 million, please see Exhibit 4, Tab 5, Schedule 1, Attachment 2, updated March 8, 2023. Enbridge Gas is not proposing any accounting specific mitigation strategies.
- b) Depreciation studies should be conducted periodically in order to ensure that depreciation rates are underpinned by up-to-date service life estimates for assets and to monitor and adjust accumulated depreciation reserves. Historically, EGD and Union have conducted studies on five-year intervals, therefore over 10 years have passed since the last studies were implemented. Furthermore, the previous studies are not aligned in terms of depreciation methodologies and there are noted differences with the alignment of assets in various plant accounts. Enbridge Gas supports the recommendations set forth by Concentric in the depreciation study as being reasonably sound. The rates derived in the study are based on the informed professional judgement of Concentric which includes consultation with internal Enbridge Gas stakeholders, peer comparisons of other natural gas utilities and

analysis of historical data for EGD and Union plant accounts. There would be harm in adjusting rates to lessen the impact if the rates do not accurately reflect the expected depreciable life of the assets. This may cause assets to be under (or over) depreciated which would result in an increase (or decrease) to depreciation rates in the next study.

- c) If the OEB rejects harmonized rates, Enbridge Gas would need to re-run the depreciation study as separate rate zones in order to ensure that depreciation rates are reflective of the assets and retirement for those rate zones. If the OEB rejects harmonized rates, the harmonization of depreciation methodologies including net salvage and amortization accounting and the harmonization of plant asset accounts would still be necessary to ensure that assets are depreciated under common principles across the rate zones.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 4, Tab 6, Schedule 2, pp. 3-4

Question(s):

The opening base 2022 property tax forecast is based on the annual property taxes paid in the prior year adjusted for growth, inflation and special/major projects for the 2022 estimate, 2023 Bridge Year and 2024 Test Year.

- a) In Table 2, Enbridge Gas has provided the property tax forecast for 2022, 2023 and 2024. Please provide a revised table that shows the actual numbers for 2022.
- b) Please confirm if property taxes related to the Dawn to Corunna Replacement Project are included in the property tax forecast.

Response:

- a) Enbridge Gas's 2022 Estimate and actual results were consistent for property tax. Please see the table for 2022 actual results.

Table 2
Property Tax Forecast

Line No.	Particulars (\$ millions)	<u>2022</u> Actual	<u>2023</u> Bridge Year	<u>2024</u> Test Year
		(a)	(b)	(c)
1	Opening Base	117.2	120.2	124.4
2	Mains and Service Growth	1.3	1.0	0.9
3	Special and Major Projects	0.5	0.3	1.3
4	Inflation	1.2	2.9	2.7
5	Subtotal	<u>120.2</u>	<u>124.4</u>	<u>129.3</u>
6	Less: Unregulated Storage Taxes	<u>(1.8)</u>	<u>(1.9)</u>	<u>(2.1)</u>
7	Total	<u>118.5</u>	<u>122.5</u>	<u>127.2</u>

Notes:

- (1) Special and major projects includes leave to construct projects, major land acquisitions/dispositions and redevelopment.
- (2) 2024 unregulated storage taxes include the storage and general plant assets allocation for shared facilities for non-utility usage. This reflects the proposed methodology as provided at Exhibit 1, Tab 13, Schedule 2.

b) Confirmed.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 4, Tab 6, Schedule 2, p. 5

Question(s):

At the above reference, it is stated when discussing the property tax forecasts contained in the application that:

An inflation escalation rate of 1% was used for the 2022 Estimate. This escalation rate was based on an internal analysis of pipeline tax impacts for the 2016 to 2020 taxation years. The 2021 taxation year was excluded due to the business education tax reductions implemented by the Ministry of Finance in 2021....

The 2023 and 2024 utility property tax forecast has been adjusted for the inflation rate of 2.4% and 2.2% respectively for the Bridge Year and Test Year as provided in the Economic and Financial Assumptions provided at Exhibit 3, Tab 2, Schedule 4.

Please state why different methodologies were used to determine the inflation escalation rate for the 2022 estimate and the 2023 and 2024 utility property tax forecast.

Response:

There was a significant decrease in the 2021 property taxes due to the reduction in the business education tax rates on commercial, industrial and pipeline properties across the province pursuant to Ontario Regulation 46/21. It was uncertain if further tax mitigation measures would be enacted to further assist the business classes post-COVID. In an attempt to not over-inflate the taxes, a conservative approach was taken using an internal analysis studying tax impacts in the Union Gas franchise area from 2016 to 2020. This study generated a 1% escalation, which was used in determining the 2022 property tax estimate.

However, looking toward the future it is apparent further mitigation measures are not forthcoming and with inflation and interest rates on the rise, this approach is not appropriate for 2023 and 2024. Therefore, the property tax budget uses the inflation rates found in the annual economic and financial assumptions provided at Exhibit 3, Tab 2, Schedule 4 as they are thought to provide a reasonable and accurate forecast.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Ref 1: Exhibit 4, Tab 6, Schedule 1, Attachment 2, pp 4-6

Ref 2: Exhibit 2, Tab 2, Schedule 1, Plus Attachment, p3

Question(s):

OEB staff has compiled the following table based on the information provided in Ref 1 & 2:

	(\$ Millions)	2022 Estimate	2023 Bridge Year	2024 Test Year
Ref 2	Opening Balance of Gross Property, Plant and Equipment Adjustments	10.4	(69.6)	(317.5)
	In-Service Additions	1,442.3	1,541.9	1,504.3
Ref 1	Capital Additions	1,283.9	1,387.7	1,360.9
	Variance	158.4	154.2	143.4

- a) Please reconcile the difference in the above table and provide a fixed asset continuity schedule by CCA class for 2022 to 2024.
- b) Please elaborate further on the Opening Balance Adjustments in the above table.

Response:

- a) The differences between the in-service additions (reference 2) and UCC additions (reference 1) were due to non-depreciable land costs and tax-deductible overhead and IDC, which are included in the in-service additions but are excluded from UCC additions. Please find reconciliations for 2022 to 2024 in Table 1.

Table 1
UCC Reconciliation

Line No.	Particulars (\$ millions)	2022 (a)	2023 (b)	2024 (c)
1	Additions - Reference 2	1,442.3	1,541.9	1,504.3
2	Less: Land Costs Not in CCA Schedule	(40.3)	(6.8)	(5.8)
3	Less: Tax-Deductible Overhead Costs	(106.1)	(136.1)	(128.5)
4	Less: IDC	(12.0)	(11.3)	(9.1)
5	Additions - Reference 1	1,283.9	1,387.7	1,360.9

Please see Attachment 1 for CCA class level reconciliations for 2022 to 2024, which provides a breakdown of net UCC additions and, together with Exhibit 4, Tab 6, Schedule 1, Attachment 2, pages 4 to 6 (reference 1), present a complete picture of CCA class level fixed asset continuity.

- b) The 2022 Estimate opening balance adjustment of \$10.4 million is due to adding investment in leased assets to rate base which were excluded in 2021. The balances pertaining to leased assets are removed from property, plant and equipment (PP&E) and reclassified to the deferred amounts and other assets line item for corporate financial reporting purposes, in accordance with US GAAP guidance. However, Enbridge Gas believes it is appropriate to continue to include these assets in rate base for regulatory purposes, under the premise that the US GAAP reclassification is for presentation purposes only.

The 2023 opening balance adjustment of (\$69.6 million) reflects the removal of the St. Laurent Phase 3 Ottawa North Replacement Project. At the time the 2022 Forecast was being prepared, the project had a planned in-service date of December 2022, and was reflected in the 2022 Forecast as such. However, following the OEB Decisions in EB-2021-0148 and EB-2020-0293, which found the project did not qualify for ICM funding and denied leave-to-construct approval, the project was removed from the 2023 opening PP&E balance so as not to impact the 2023 rate base value or subsequent rollover to the 2024 opening rate base value.

The 2024 opening balance adjustment of (\$317.5 million) is due to the proposed asset harmonization and harmonized unregulated storage cost allocation methodology implementation in 2024, as provided at Exhibit 2, Tab 2, Schedule 1 pages 6 to 8. As provided at Exhibit 2, Tab 2, Schedule 1, page 7, the asset harmonization gross PP&E adjustment of (\$300.2 million) was offset by a

corresponding adjustment to PP&E accumulated depreciation, resulting in no impact to net PP&E.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Ref 1: Exhibit 4, Tab 6, Schedule 1, Attachment 2, Actuals/Summary of Capital Cost Allowance (CCA)

Ref 2: Exhibit 1, Tab 8, Schedule 1, Attachment 14, p 70, 2021 T2 Corporation Income Tax Return/Capital Cost Allowance (CCA)

Question(s):

- a) OEB staff has compiled the following table based on the information provided in Ref 1 & 2:

(\$000s)	Ref 1, p.3	Ref 2	Variance
2021 Capital Cost Allowance	829,932.6	857,929.3	27,996.7
Ending Undepreciated Capital Cost	9,757,141.6	9,764,697.9	7,556.3

Please reconcile the difference in the above table.

- i. Please confirm that the capital assets by class in Reference 1 are 100% related to Enbridge Gas's regulated business. If not confirmed, please explain.
 - ii. If the capital assets by class in Reference 1 are not 100% related to Enbridge Gas's regulated business, please provide the breakdown between the regulated business and unregulated business for Enbridge Gas and please also explain why unregulated business was not excluded for regulatory purpose?
- b) In Reference 1, the 2019 to 2022 CCA schedules show a column for "True-up from Filing to Tax Return" and the 2023 CCA schedule shows a column for "Opening Balance Adjustments". Please explain what these columns represent, why it is a different amount each year, and why it is needed.
- c) In Reference 1, the 2024 CCA schedules show a column for "Asset Harmonization Adjustment". Please explain what this column represents and why it is needed.

Response:

- a)
 - i. Confirmed.
 - ii. Please see response at part i.
- b) "True-up from Filing to Tax Return " represents the difference between the prior year ending undepreciated capital cost (UCC) balance based on the final tax return information and the preliminary ending UCC balance based on the prior year end estimate. "Opening Balance Adjustment" for 2023 is an adjustment to update to the forecasted capital additions in 2022. For example, if a capital project that was originally forecasted to be in service in 2022 but was deferred to later years, this decrease is reflected in UCC additions as an adjustment to the opening UCC balance for 2023.
- c) The "Asset Harmonization Adjustment" column for 2024 represents the UCC of the assets impacted by the harmonization between EGD and Union's historical treatment of asset classification. If an asset is to be included in a different CCA class under the harmonization, the asset's UCC balance as at December 31, 2023 is to be reclassified from the old CCA class to the new CCA class. In addition to the reclassifications that net to zero overall, there is an additional adjustment of (\$1.3 million) for the harmonization of approach on regulated versus unregulated allocation of general plant assets.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Ref 1: Exhibit 4, Tab 6, Schedule 1, Attachment 1, p 6 – 2024 Test year Calculation of Utility Taxable Income and Income Tax Expense

Ref 2: Exhibit 1, Tab 8, Schedule 1, Attachment 14, pp 47, 48, 87 - 2021 T2 Corporation Income Tax Return

Question(s):

- a) The following tax additions: “scientific research expenditures deducted per financial statements” and “reserves from financial statements – balance at the end of the year” are in Reference 2 p.47. These types of adjustments do not appear to be in Reference 1. Please confirm this or identify where it is included in Reference 1.
 - i. If confirmed, please explain why these adjustments are not included for regulatory taxes in Reference 1 and revise regulatory taxes as applicable.

- b) The following tax deductions: “SR&ED expenditures claimed in the year” and “reserves from financial statements – balance at the beginning of the year” are in Reference 2 p.47. These types of adjustments do not appear to be in Reference 1. Please confirm this or identify where it is included in Reference 1.
 - i. If confirmed, please explain why these adjustments are not included for regulatory taxes in Reference 1 and revise regulatory taxes as applicable.

- c) In Reference 2 p.87, Enbridge Gas had “investment tax credits on SR&ED expenditures”. Please explain whether Enbridge Gas typically qualifies for SR&ED Income Tax Credits (ITC) and whether these amounts are material. If material, please provide the SR&ED ITCs from 2013 to 2021.
 - i. Tax credits do not appear in the calculation of regulatory taxes in Reference 1. Please confirm.
 - ii. If confirmed, please explain why they are not included in the calculation of regulatory taxes.
 - iii. If not confirmed, please indicate where it is included in the calculation of regulatory taxes and the amounts of the tax credits.

Response:

- a) Confirmed. Enbridge Gas tracks the “scientific research expenditures deducted per financial statements” on a lag basis as a result of the uncertainty and low financial impact of the relevant work, as explained in response at part c).

The “reserves from financial statements – balance at the end of the year” cannot be forecasted due to its contingency nature, so for a future year it is always forecasted as no changes, i.e., the balance at the end of the year is assumed the same as the balance at the beginning of the year for the reserves. As a result, this item is net to zero in the 2024 Test Year Calculation of Utility Taxable Income and Income Tax Expense.

- b) Please see response at part a).
- c) Enbridge Gas may have costs that qualify for the SR&ED ITC in a year, but there is no certainty until a SR&ED claim is assessed by the Canada Revenue Agency (CRA) for the year. An external consultant helps to identify potential SR&ED work subsequent to the end of the taxation year when the full year information is available. Enbridge Gas will then submit SR&ED claims based on the consultant’s recommendation (if any), but the claims are subject to the CRA’s review and assessment. The Company cannot estimate the effect until an assessment is issued by the CRA. The average SR&ED ITC from 2013 to 2021 was \$0.3 million and the future SR&ED ITC, if any, is anticipated to be immaterial.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Ref 1: Exhibit 4, Tab 6, Schedule 1, p.6

Ref 2: Exhibit 4, Tab 6, Schedule 1, Attachment 1, p. 6 – 2024 Test year Calculation of Utility Taxable Income and Income Tax Expense

Question(s):

Reference 1 states for Union Gas's determination of utility income subject to tax, a deduction for interest during construction (IDC) was included, consistent with how corporate income taxes are calculated for tax filing purposes, along with interest determined through utility capital structure. The Union Gas approach has been adopted for Enbridge Gas.

The calculation of utility taxable income and income tax expense for 2024 is provided in Reference 2.

- a) Please confirm that for tax purposes, Enbridge Gas deducts interest expense equal to deemed interest plus IDC. If not confirmed, please clarify.
- b) Please indicate where the IDC deduction is included in the calculation of regulatory taxes in Reference 2 and provide the amount.
- c) Please explain and quantify the impact on the 2024 utility income tax calculation if the EGD approach for IDC is adopted.
- d) The calculation of regulatory taxes includes a calculation for the tax shield on interest expense. Please explain what the tax shield on interest expense represents, including a discussion on why it is appropriate for regulatory purposes.
 - i. Please explain whether this calculation is associated with or impacted by the IDC. If yes, please explain.

Response:

- a) Not confirmed. From a corporate tax perspective, actual interest expense inclusive of IDC, instead of the utility deemed interest expense plus IDC, is deducted. Actual interest expense would include additional interest expense incurred to fund amounts not included in utility rate base, such as deferral accounts, and to fund unregulated operations.
- b) The IDC is included in the deduction item "Items capitalized for regulatory purposes" in calculation of utility taxable income and income tax expense.
- c) If the EGD approach was adopted, which excluded IDC as a utility tax deduction, it would cause utility income taxes to increase. The increase that would occur to the 2024 forecast of utility income taxes would be \$2.1 million, calculated as the forecast 2024 IDC amount of \$7.8 million multiplied by the corporate income tax rate of 26.5%.
- d) The tax shield provided by interest expense refers to the reduced income taxes brought about by deductions to taxable income from the Company's utility interest expense. It takes the current year rate base amount and multiplies that by the return component of debt to arrive at interest component of the cost of capital, which is then multiplied by the combined tax rate of 26.5% to arrive at an income tax credit to be applied to total income taxes. The reason a calculation for the tax shield on interest expense is required is due to the fact that the utility income amount that the tax provision is calculated on removes all interest expense amounts. This provision for interest expense calculated through the Company's utility capital structure is applied as an income tax credit to the tax provision excluding interest shield to arrive at a total utility income tax amount.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 4, Tab 6, Schedule 1, Attachment 1, p. 6 – 2024 Test year Calculation of Utility Taxable Income and Income Tax Expense

Question(s):

Please explain Enbridge Gas's treatments of capital contributions for tax purposes and for regulatory tax purposes respectively (e.g. whether an election is made for capital contributions to include it in undepreciated capital property) and explain the regulatory impact of any difference in the treatment.

Response:

Enbridge Gas interprets the "capital contribution" as being the reimbursement or subsidies the company will receive from the customers, governments, or other sources to offset the capital expenditures incurred by the company. Such reimbursements will be treated the same for both legal entity tax compliance and regulatory tax purposes. An election under the Income Tax Act subsection 13(7.4) will be made on the reimbursement to treat the amount as a reduction to the Undepreciated Capital Cost (UCC) additions.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 4, Tab 7, Schedule 1, pp. 2-5

Question(s):

As part of Union Gas's 2014 rates proceeding (EB-2013-0365), parties reached an agreement to reduce the Parkway Delivery Obligation (PDO) and payment of a Parkway Delivery Commitment Incentive (PDCI) through the PDO Settlement Framework with an end date of December 31, 2018. The mechanism was subsequently extended through Enbridge Gas's 2019 to 2023 deferred rebasing term. The intent of the PDO Settlement Framework was to address the inequity in which the delivery of gas required by the utility at Parkway was achieved. Certain direct purchase (DP) customers of the former Union Gas were contractually required to deliver some or all of their daily contract quantity (DCQ) at Parkway, at their own expense. Essentially, DP customers with a PDO conferred a benefit on all users of the Dawn Parkway system because the system capacity was less than would otherwise be required. As part of the settlement agreement in EB-2013-0365 parties agreed that the PDO should be permanently reduced by shifting customers' obligated DCQ from Parkway to Dawn and the payment of a PDCI should be made for any continuing obligated DCQ deliveries at Parkway.

In this application, Enbridge Gas has proposed to expand the PDO and PDCI offering to customers located in the EGD rate zone who are contractually obligated to deliver gas at the Enbridge CDA.

Please clarify if customers located in the EGD rate zone have requested a reduction to their obligated deliveries to the Enbridge CDA.

Response:

Customers in the EGD rate zone have not requested a reduction in their obligated deliveries to the Enbridge CDA.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Ontario Energy Board Staff (STAFF)

Interrogatory

Reference:

Exhibit 4, Tab 7, Schedule 1, pp. 14-16

Question(s):

In Enbridge Gas's MAADs proceeding (EB-2017-0305/0306), certain parties claimed that ratepayers were paying twice for the same Dawn Parkway system capacity. At the time of Union Gas's 2013 Cost of Service proceeding (EB-2011-0210), 210 TJ/day of excess Dawn Parkway capacity existed relative to the forecast demands of the Dawn Parkway system. The full cost of the Dawn Parkway system was included in the company's revenue requirement and allocated based on the forecast demands. Enbridge Gas has noted that if the company adjusts for the excess capacity incorporated in base rates during Union Gas's 2014 to 2018 IRM term and/or Enbridge Gas's 2019 to 2023 deferred rebasing term as part of the current application, the company will not be kept whole as agreed to by parties in the PDO Settlement Framework and subsequently approved by the OEB. The PDO Settlement Framework will instead reduce the utility's earnings during the IRM term(s), as the excess capacity would have otherwise been available to sell. Enbridge Gas believes that adjusting for the excess capacity as part of this application would be contrary to the guiding principles of the PDO Settlement Framework.

- a) Please confirm if Enbridge Gas recovered the cost of 210 TJ/day of excess Dawn Parkway capacity in rates.
- b) Enbridge Gas notes that in the absence of the PDO Settlement Framework, the excess capacity would have been available to sell. If the excess capacity had been sold, how would the revenues have been accounted for in rates?

Response:

- a) Confirmed. The full cost of the Dawn Parkway System was recovered in rates approved in Union's 2013 Cost of Service proceeding¹. The forecast used to derive rates included 210 TJ/day of excess Dawn Parkway System capacity.

¹ EB-2011-0210.

- b) Revenue from the sale of the excess Dawn Parkway System capacity would not have been accounted for in rates. The revenue was included in utility earnings subject to earnings sharing during Union's 2014-2018 Incentive Regulation term, and subsequently extended to 2023 through the rate-setting mechanism approved in the MAADs proceeding².

In Union's 2013 Cost of Service proceeding, parties argued the excess capacity may be contracted for and that a variance account should be established to record the revenue if the excess capacity was sold.³ In the OEB Decision, the OEB rejected this request and OEB findings on the topic note:

The Board accepts Union's forecast of 2013 M12 Long-Term Transportation Revenue, Other Long-Term Transportation Revenue, and Other S&T Revenue as reasonable. The Board will not require Union to adjust estimated revenues as was suggested by some parties, as the Board concurs with Union that the adjustments are selective in nature. The Board rejects LPMA's request to establish a variance account related to Long-term Transportation Revenue, as the Board believes that Union should continue to bear this forecast risk, consistent with the current treatment.⁴

² EB-2017-0306/EB-2017-0307.

³ EB-2011-0210 Decision and Order, October 24, 2012, pp.20-21.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Consumers Council of Canada (CCC)

Interrogatory

Reference:

Ex. 4/T7/S1/p. 3

Question(s):

The evidence states, “Enbridge Gas is proposing to continue with the PDO reduction and PDCI payment as outlined in the proposed PDO Framework, provided at Attachment 1, as its reasonable for the efficient management of the Dawn Parkway System capacity. The proposed PDO Framework will replace the current PDO Settlement Framework effective January 1, 2024 and serve as a reference document for the PDO reduction, PDCI payment and PDO reporting for the next IR term and beyond”. Please explain how this change impacts EGI’s residential rate classes in 2024.

Response:

The impact Enbridge Gas’s PDO Framework proposal will have on rate classes for residential customers is regarding the allocation of costs associated with the PDO Framework.

- Removal of Sales Service PDCI Payment – The current framework provides sales service customers a PDCI payment as a credit to the Purchase Gas Variance Account. The 2023 Estimate forecast PDCI payment for sales service customers in the Union South rate zone is \$0.7 million. Enbridge Gas is proposing to eliminate the sales service credit to account for a change in the rate design, as explained at Exhibit I.4.7-EP-86 part d).
- Allocation of PDCI Payment Costs – The current framework requires the costs to be allocated to Union South in-franchise rate classes. Enbridge Gas is proposing a change to the allocation of the costs associated with the PDO Framework to include both in-franchise and ex-franchise rate classes, consistent with the allocation of the Dawn Parkway transmission demand costs. The change in the allocation of costs is explained at Exhibit I.4.7-TCPL-2 part b).

There is no impact to the services provided to rate classes for residential customers as a result of the proposed PDO Framework.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Energy Probe Research Foundation (EP)

Interrogatory

Reference:

Exhibit 4, Tab 7, Schedule 1, Pages 5 and 6, Paragraphs 14-18, *Parkway Delivery Option, and PDCI*

Question(s):

- a) Will System Gas (SG) Customers in former Union Rate zone have gas delivered to Parkway?
- b) Will SG customers in EGD rate zone still have gas delivered to Parkway? Please discuss.
- c) Provide Winter Volumes arriving at Parkway from Dawn and from TCPL, Separate SG and DP volumes.

Response:

- a-b) Yes. Enbridge Gas will continue to deliver gas at Parkway on behalf of system customers using the Dawn Parkway System. Enbridge Gas also delivers gas to the Union CDA, Union ECDA and Enbridge CDA on behalf of system customers¹.
- c) Please see response at Exhibit I.4.7-EP-86 part a).

Enbridge Gas is not able to provide this information. The Parkway Delivery Obligation (Union South rate zone) is delivered to the discharge side of Parkway (TCPL) by direct purchase customers however this volume can be delivered either from TCPL or from Dawn (i.e. using an ex-franchise Rate M12 contract). For the volumes transported from Dawn or Empress using Enbridge Gas's upstream transportation contracts or the Dawn Parkway System, there is no allocation between system gas and direct purchase.

¹ Sales service customers currently receive a PDCI for the contracted quantities delivered at the Union ECDA.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Energy Probe Research Foundation (EP)

Interrogatory

Reference:

Exhibit 4, Tab 7. Schedule 1, Attachment 1, Page 2

Question(s):

- a) Please provide a Flow chart Showing deliveries at Parkway with and without the PDO. Show winter volumes at Dawn and at Parkway with a breakdown between former Union and former EGD DP customers.
- b) Please provide the 2024 forecasted turnback.
- c) How will System Gas be addressed? Do SG customers pay to have gas delivered to Parkway? Please provide the current winter SG volumes.
- d) Why should SG customers not receive a PDO and PDCI payment as they did historically?

Response:

- a) Table 1 details the deliveries on design day at Parkway with and without PDO. Table 2 details the design day demand at Dawn for the Dawn Parkway System with a breakdown of Union and EGD customers.

Table 1
Design Day Deliveries at Parkway with and without PDO

Line No.	Winter 2023/2024 (TJ/d)	With PDO (a)	Without PDO (b)
	<u>Parkway Suction</u>		
1	Union South	209	209
2	EGD	1,394	1,394
3	Total Suction Flow	1,603	1,603
	<u>Parkway Discharge</u>		
4	Union South	0	0
5	Union North	435	435
6	EGD	1,720	1,720
7	Ex-franchise	2,327	2,327
8	PDO (Union South)	(253)	0
9	Excess capacity	89	(164)
10	Total Discharge Flow	4318	4318

Table 2
Breakdown of Dawn Parkway Design Day Demand Served from Dawn

Line No.	Winter 2023/2024 (TJ/d)	With PDO (a)	Without PDO (b)
1	Union South	2,588	2,588
2	Union North	435	435
3	EGD	3,185	3,185
4	Ex-franchise	1,949	1,949
5	PDO	(253)	
6	Total Dawn Flow	7,904	8,157

b) 2024 turnback is comprised of:

- TransCanada Pipelines Limited M12X013 (13,182 GJ/d Dawn to Parkway capacity); and
- TransCanada Pipelines Limited M12219 (13,545 GJ/d Kirkwall to Parkway capacity).

There is no other turnback expected for 2024.

c) The cost of transportation capacity to Parkway or the Enbridge CDA is proposed to be included in the gas supply transportation charge paid for by sales service (system

gas) and bundled direct purchase customers as described at Exhibit 8, Tab 2, Schedule 2, page 13. Sales service customers are not solely responsible for the cost of transportation capacity to Parkway with the exception of transportation capacity from Niagara and Chippawa to the Enbridge CDA which is included in the derivation of the weighted average reference price. Furthermore, PDCI is only available to the discharge side of the Parkway compressors.

The 2024 forecast of sales service winter volumes is 234,468 10³m³.

- d) Enbridge Gas proposes to no longer apply a PDCI credit to sales service customers because the cost of the transportation capacity to Parkway is no longer solely allocated to sales service customers as it was prior to 2024 for the Union South rate zone. Regarding the transportation capacity from Niagara to the Enbridge CDA referred to in part c), a PDCI payment is not warranted because there is no burden on sales service customers for the transportation cost. The landed cost of gas in the Enbridge CDA using the Niagara and Chippawa to the Enbridge CDA contract is not more expensive than purchasing gas at Dawn and transporting it to the Enbridge CDA using the Dawn Parkway System.

Ex. 4, Tab 7, Schedule 1, pg. 5 & Ex. 4 Tab 2, Schedule 1, Attachment 3, pg. 3

Preamble:

EGL evidence states: *Enbridge Gas is proposing to expand the PDO and PDCI offering to customers located in the EGD rate zone who currently are contractually obligated to deliver gas at the Enbridge CDA⁹ ...*

⁹ *The Enbridge CDA is an interconnect between TransCanada and Enbridge Gas located at the east end of the Dawn Parkway System.*

Question(s):

For the purposes of delivery, does TC Energy view the east end of the Dawn Parkway System and the Enbridge CDA as the same delivery point. Please explain.

- a) Please explain the location of Union Parkway Belt, including suction or discharge, relative to Parkway.
- b) Please explain why EGD holds over 300,000 GJ/day from Union Parkway Belt to the EGD CDA.
- c) Does EGL accept deliveries to the east end of the Dawn Parkway System as an alternate delivery point for Bundled Transportation contracts with EGD CDA obligations?
 - i. If requested by the customer, do they have a right to deliver to Parkway to fulfill their obligation to the EGD CDA? Please explain.

Response:

TransCanada does not include the Parkway-Enbridge meter station in the Enbridge CDA¹. Shippers transporting gas from the Enbridge Gas system at Parkway to the

¹ TCPL 2021-2026 Mainline Settlement Application, p.58. Approved in CER Order TG-003-2020

Enbridge CDA are required to transport gas from the TransCanada receipt point at the discharge side (TCPL) of Parkway (Union Parkway Belt) to the Enbridge CDA delivery point.

- a) Union Parkway Belt is a term that is used by TransCanada to describe the TransCanada Mainline interconnect point with the Enbridge Gas Dawn Parkway System at Parkway. Specifically, it is the compressor discharge interconnect at the Parkway East Compressor Station and Parkway West Compressor Station.
- b) The purpose of the TransCanada capacity held by Enbridge Gas from Union Parkway Belt to the Enbridge CDA is to facilitate the delivery of gas on the TransCanada Mainline from Parkway into the Enbridge CDA for in-franchise customers.
- c) Enbridge Gas does not accept deliveries to the east end of the Dawn Parkway System as an alternative delivery point for bundled transportation contracts with Enbridge CDA obligations.
 - i. The customer does not have the right to deliver to Parkway to fulfill their obligation to the Enbridge CDA, as the Parkway-Enbridge meter is not included in the Enbridge CDA.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 4, Tab 7, Schedule 1, pg. 5 & Ex. 4 Tab 2, Schedule 1, Attachment 3, pg. 3

Preamble:

EGL evidence states: *These customers provide a similar system benefit as the DP customers in the Union South rate zone with a PDO, as they have the option to deliver gas to Dawn, which would otherwise increase the Dawn Parkway System demand.*

Question(s):

Please explain how these customers have the option to deliver at Dawn when Union South customers, west of Dawn, can only access the option to move deliveries from Parkway to Dawn when EGL offers it. Please explain fully.

Response:

Consistent with Union South rate zone, customers in the EGD rate zone that deliver gas to the Enbridge CDA could request to move their deliveries to Dawn when capacity is available and offered to the market by Enbridge Gas.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 4, Tab 7, Schedule 1, pg. 5 & Ex. 4 Tab 2, Schedule 1, Attachment 3, pg. 3

Preamble:

EGI evidence states: *As part of the current service offerings in the EGD rate zone, Enbridge Gas offers a bundled DP service option to deliver gas at Parkway as part of the Ontario TService. These customers currently do not pay gas supply transportation charges to transport gas to Parkway as they deliver their gas directly to Parkway.*

Question(s):

Currently, to which rate zone customers does EGI offer an Ontario Tservice that has an option to deliver at Parkway?

- a) If EGD Rate Zone customers, do they pay any additional transportation charges from Parkway to EGD CDA? Please explain why or why not.

Response:

Enbridge Gas does not provide Ontario T-service customers with an option to deliver directly at Parkway. EGD rate zone Ontario-T customers have an obligated delivery point at the Enbridge CDA¹. Parkway and the Enbridge CDA are collectively referred to as Parkway throughout the evidence at Exhibit 4, Tab 7, Schedule 1.²

- a) The customer directly incurs the transportation costs to deliver gas to the Enbridge CDA, as that is their obligated point of receipt.

¹ EGD rate zone Ontario-T customers can also have an obligated delivery point at the Enbridge EDA.

² Exhibit 4, Tab 7, Schedule 1, paragraph 14.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 4, Tab 7, Schedule 1, pg. 7-8

Preamble:

EGL evidence states: *At its sole discretion, Enbridge Gas would consider the use of Dawn Parkway System turnback to reduce the PDO provided any quantities turned back were first offered to the market through an existing capacity open season. The priority for using excess Dawn Parkway System capacity is to serve contracted long-term demands.*

Question(s):

Does EGL consider its sole discretion to be subject to Board approval?

a) Please confirm the Board could also order EGL to implement such a use.

Response:

No. Enbridge Gas is requesting OEB approval to update the PDO Framework as part of this Application. The approval of the updated PDO Framework would allow Enbridge Gas to utilize excess Dawn Parkway System capacity to reduce the PDO at its sole discretion.

a) Confirmed.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 4, Tab 7, Schedule 1, pg. 7-8

Preamble:

EGL evidence states: *At its sole discretion, Enbridge Gas would consider the use of Dawn Parkway System turnback to reduce the PDO provided any quantities turned back were first offered to the market through an existing capacity open season. The priority for using excess Dawn Parkway System capacity is to serve contracted long-term demands.*

Question(s):

Please provide the Board order or directive that stipulates that the priority for using excess Dawn Parkway System capacity is to serve contracted long-term demands.

Response:

According to the Storage and Transportation Access Rule (STAR), Section 2.1.2 states “Existing capacity that is available for long-term firm transportation service shall be offered through an open season”¹.

Enbridge Gas is requesting approval to update the PDO Framework as part of this Application, which includes the ability for Enbridge Gas to utilize excess Dawn Parkway System capacity to reduce the PDO after that excess capacity was offered to the market. The current PDO Settlement Framework intended for Union to utilize Dawn to Kirkwall turnback as the primary method to reduce PDO. Offering excess Dawn Parkway capacity after offering it to the market through an existing capacity open season ensures that Enbridge Gas places capacity to serve market demands.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 4, Tab 7, Schedule 1, pg. 13

Preamble:

EGL evidence states: *PDO fuel costs included in rates provides recovery of the incremental compressor fuel requirements to transport gas on the Dawn Parkway System as customers shift their deliveries from Parkway to Dawn.*

Question(s):

Please describe the methodology that EGL uses to determine the amount of fuel to be allocated to the PDO costs for each month of the year.

- a) How does EGL reconcile this estimate to ensure that actual fuel used is reconciled to the forecasted amount of fuel in this determination?

Response:

During the deferred rebasing term, the base for the costs and forecast activity is 2013 Cost of Service¹. As customers shift obligated deliveries from Parkway to Dawn, flows easterly from Dawn to Parkway increase daily by an amount equal to the shift in obligated deliveries. The incremental daily transport, caused by increased in-franchise easterly flow, creates a requirement for incremental fuel at each compressor station between Dawn and Parkway. The incremental fuel is then allocated to rate classes based on the proportionate throughput through the compressor station.

- a) Enbridge Gas does not true-up in-franchise fuel variances, including variances associated with the PDO. Enbridge Gas does true-up the difference between forecast and actual fuel at the Lobo, Bright and Parkway compressor stations for ex-franchise transportation customers taking service under Rate M12 through the Yearly Commodity Required (YCR) calculation found on the M12 rate schedule.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 4, Tab 7, Schedule 1, pg. 14
AND EB-2017-0306/EB-2017-0307 Exhibit J2.5 Attachments 1 & 2

Preamble:

EGL evidence states: *At the time of Union's 2013 Cost of Service proceeding, 210 TJ/d of excess Dawn Parkway capacity existed relative to the forecast demands of the Dawn Parkway System. The full cost of the Dawn Parkway System was included in the Company's revenue requirement and allocated based on the forecast demands, consistent with a cost of service treatment.*

Question(s):

Over what forecasted utilization was the full cost including the 210 TJ/d of excess Dawn Parkway capacity recovered?

- a) What was the revenue requirement of the full Dawn-Parkway system including the excess 210 TJ/d for 2015 prior to any additional recoveries as a result of the 2015 expansion?
- b) Please provide the actual revenue generated in 2015 from:
 - i. In-franchise rates
 - ii. Ex-franchise M12 rates
 - iii. PDO revenue from in-franchise customers

Response:

The forecast used in Union's 2013 Cost of Service proceeding¹ included Dawn Parkway System capacity of 6,803 TJ/d and Dawn Parkway System demands of 6,593 GJ/d for total excess capacity of 210 TJ/d. Please see response at Exhibit I.4.7-FRPO-169,

¹ EB-2011-0210.

Attachment 1, column (a) for the annual forecast approved in Union's 2013 Cost of Service proceeding².

- a) Enbridge Gas does not prepare a cost allocation study to determine the allocation of costs to the Dawn Parkway System on an annual basis. In Union's 2013 Cost Allocation Study, the revenue requirement for the Dawn Parkway System was approximately \$165 million.³
- b) Enbridge Gas cannot provide the 2015 actual revenue associated with Dawn Parkway, as the costs for the Dawn Parkway System are embedded in rates. Please see response at Exhibit I.4.7-STAFF-187 for additional discussion on the 210 TJ/d of excess Dawn Parkway capacity.
 - i. For 2015 actual in-franchise total revenue, please see Exhibit 3, Tab 1, Schedule 1, Table 1, column (d), lines 1 and 8.
 - ii. For 2015 actual Rate M12 total revenue, please see Exhibit 3, Tab 4, Schedule 1, Attachment 1, page 2, column (d), lines 13 and 14.
 - iii. For PDO revenue included in rates, please see response at Exhibit I.4.7-FRPO.169 Attachment 1.

² Ibid.

³ 2013 Dawn Parkway System revenue requirement from the 2013 Cost Allocation Study. Includes the allocated demand costs of the Dawn Station and Dawn Trafalgar Easterly functional classifications.

Notes:

(1) W2015/2016 - Incremental capacity resulting from the Brantford-Kirkwall / Parkway D Project of 433 TJ/d.
W2016/2017 - Incremental capacity resulting from the Dawn Parkway 2016 System Expansion Project of 443 TJ/d.
W2017/2018 - Incremental capacity resulting from the 2017 Dawn Parkway Project of 457 TJ/d.

(2) The PDO shift was reflected in Dawn Parkway excess/(shortfall) beginning W2015/2016.

(3) The W2013/2014 forecast filed in Union's 2013 Cost of Service proceeding (EB-2010-0210) included 210 TJ/d of excess Dawn Parkway capacity. In the EB-2011-0210 Decision, the OEB accepted Union's forecast and regulatory treatment. Union's 2013 Cost Allocation Study allocates Dawn Parkway demand costs in proportion to distance weighted design day demands. The 2013 allocation resulted in approximately 84% of costs allocated to Union's ex-franchise rate classes and 16% to Union's in-franchise rate classes.

(4) In accordance with the Settlement Framework for Reduction of Parkway Delivery Obligation ("PDO Framework") (EB-2013-0365) effective April 1, 2014, Union had temporarily available Dawn Parkway capacity which was used to facilitate 146 TJ/d of PDO shift. Parties agreed Union would include the demand and fuel costs associated with the 146 TJ/d of capacity in delivery rates. (PDO Framework, paragraph B1)

(5) Consistent with the PDO Framework, effective November 1, 2015 the temporarily available capacity was forecast to be used for other purposes leaving Parkway in a delivery shortfall position. Parties agreed that the demand and fuel costs associated with the temporarily available capacity would remain in delivery rates for Union to manage the Parkway delivery shortfall through the acquisition of incremental resources. M12 Dawn to Kirkwall turnback was to be used to first reduce the Parkway delivery shortfall and then to further reduce the remaining PDO. All incremental costs associated with the incremental PDO reduction were recovered by Union in rates (or deferral account due to timing differences). (PDO Framework, Paragraph B2)

(6) As part of the 2017 Dawn-Parkway Expansion Project (EB-2015-0200), Union had forecast a surplus of 30,393 GJ/d on the Dawn Parkway System following the completion of the project. As part of the EB-2015-0200 Settlement Agreement, Union agreed to market the surplus capacity in accordance with the Storage and Transportation Access Rule ("STAR") and credit the revenues to the project deferral account.

Answer to Interrogatory from
Federation of Rental-housing Providers of Ontario (FRPO)

Interrogatory

Reference:

Ex. 4, Tab 7, Schedule 1, Attachment 1

Preamble:

EGL evidence states: *Bundled and semi-unbundled direct purchase (DP) customers are contractually obligated to deliver gas to Enbridge Gas at various points of receipt upstream or on Enbridge Gas's system, including the interconnect with TransCanada at Parkway and with the Enbridge CDA.*

Question(s):

Please indicate all points of delivery embedded in DP contracts where the counterparty could be obligated to deliver their gas in the Enbridge CDA.

- a) Please provide all other points that EGL can require obligated deliveries from DP customers.
- b) If parties were willing to obligate deliveries to Kirkwall, would EGL consider providing an incentive comparable, but not necessarily equal, to the PDCI?
 - i. If not, why not? Please explain.

Response:

Bundled direct purchase customers in the EGD rate zone with an Enbridge CDA point of receipt nominate to deliver their daily supply to the Enbridge CDA.

- a) Table 1 provides the obligated points of receipt for the bundled direct purchase services in each of the current rate zones. The points of receipt in the Union South rate zone apply to semi-unbundled direct purchase as well.

Table 1
Obligated Points of Receipt

<u>Line No.</u>	<u>Services</u>	<u>Points of Receipt</u>
	EGD rate zone	
1	Dawn Transportation Service (DTS)	Dawn
	Ontario Transportation Service (OTS)

Industrial Gas Users Association (IGUA)

Interrogatory

Reference:

Exhibit 4, Tab 7, Schedule 1, Attachment 1, paragraph 7.

Preamble:

EGI states:

The priority for utilizing excess Dawn Parkway System capacity is to serve long-term demands.

Question(s):

Please explain the rationale for this priority.

Response:

Please see Exhibit I.4.7-FRPO-165.

ENBRIDGE GAS INC.

Answer to Interrogatory from
Industrial Gas Users Association (IGUA)

Interrogatory

Reference:

Exhibit 4, Tab 7, Schedule 1, Attachment 1, paragraphs 8-9.

Preamble:

EGL explains the proposed approach to allocation to delivery customers of available capacity to reduce the PDO.

Question(s):

- a) Please confirm that customers holding M12 Dawn to Parkway capacity to meet their PDO and customers not holding M12 Dawn to Parkway capacity to meet their PDO are treated the same in EGL's proposed capacity allocation methodology.
- b) If not confirmed, please explain the differences in treatment proposed based on whether or not the customer holds M12 Dawn to Parkway capacity.

Response:

- a) Confirmed.
- b) Please see part a).

Question(s):

With respect to changes to the PDO Framework:

- a) Please provide the forecast 2024 PDO costs, broken down into each of the PDO Demand, PDO Fuel and PDCI costs.
- b) [p.4-7] For each of the proposed changes to the PDO Framework, please provide the incremental cost/savings, broken down into the three categories in part (a).

Response:

- a) The 2024 Test Year revenue requirement includes \$17.6 million of PDCI costs. PDO costs that were labelled as PDO Demand or PDO Fuel by Union between 2014 and 2023 related to the recovery of Dawn Parkway System costs associated with ex-franchise turnback. This turnback was used to facilitate a shift of obligated deliveries for direct purchase customers from Parkway to Dawn during the deferred rebasing term. In the 2024 Test Year revenue requirement, the Dawn Parkway System costs are integrated in the revenue requirement and not specifically identified.
- b) Table 1 provides the impact to the PDCI costs of the four rate design changes that impact the PDO Framework.

Table 1
Total Proposed PDCI Costs

Line No.	Particulars	Quantity (GJ/d) (a)	Unit Rate (\$/GJ) (b)	Total PDCI Costs (\$)(1) (c)
<u>Current Approved PDCI Costs</u>				
1	Union South Parkway Obligation	226,333	0.173	14,331
2	Firm Exchange Service	26,514	0.110	1,067
3	Total Current Approved PDCI Costs	<u>252,847</u>		<u>15,398</u>
<u>Proposed PDO Framework Changes</u>				
4	Expand PDCI Payment	45,964	0.173	2,910
5	Seasonal DCQ PDCI Payment	-	-	-
6	Remove Sales Service PDCI Payment	(11,000)	0.173	(696)
7	Allocation of PDCI Payment Costs	-	-	-
8	Total Proposed PDO Framework Changes	<u>34,964</u>		<u>2,214</u>
9	Total Proposed PDCI Costs	<u><u>287,811</u></u>		<u><u>17,612</u></u>

Answer to Interrogatory from
School Energy Coalition (SEC)

Interrogatory

Reference:

4-7-1, p.5

Question(s):

With respect to the expansion of PDCI payments to customers contractually required to deliver gas to the CDA:

- a) What is the forecast 2024 volume of gas related to this requirement that would be eligible for PDCI payments and the costs?
- b) Please confirm that before the PDO Settlement Framework, certain direct-purchase Union South customers were required to deliver their gas to Parkway, while others were simply required to deliver them to Dawn.
- c) Please confirm that before the merger, all Enbridge direct-purchase customers in the EGD CDA were required to deliver their gas to the EGD CDA.

Response:

- a) The 2024 Test Year Forecast for deliveries of gas into the Enbridge CDA by Ontario-T Service customers in the EGD rate zone is approximately 46 TJ/d or 16.8 PJ. The total PDCI cost associated with the 16.8 PJ included in the 2024 revenue requirement is approximately \$2.9 million.
- b) Confirmed. Prior to the PDO Settlement Framework, Union South direct purchase customers had a delivery obligation at Dawn, Parkway, or a combination of both.
- c) Not confirmed. EGD rate zone direct purchase customers had delivery obligations at Empress, Dawn, the Enbridge CDA or the Enbridge EDA.

Answer to Interrogatory from
TransCanada PipeLines Limited (TCPL)

Interrogatory

Reference:

- 1) Exhibit 4, Tab 7, Schedule 1, Page 7 of 16, Paragraph 19.
- 2) Exhibit 7, Tab 2, Schedule 1, Attachment 6, Page 3 of 4.
- 3) Exhibit 7, Tab 1, Schedule 4, Page 13 of 20, Paragraphs 37 to 39.
- 4) Exhibit 7, Tab 1, Schedule 4, Page 14 of 20, Paragraph 41 to 43.
- 5) EB-2019-0194, Enbridge's Response to TCPL Interrogatory Exhibit I.TCPL.2, f).

Preamble:

Reference 1) discusses how EGI is proposing to change the allocation of the PDCI payment costs within the 2024 cost allocation study. Under the approved methodology the cost of the PDCI payment is currently allocated to Union South in-franchise rate classes in proportion to firm design day demands on the Dawn Parkway System. Enbridge Gas is proposing to change the allocation of the PDCI payment costs to include both in-franchise and ex-franchise rate classes, consistent with the allocation of the Dawn Parkway Transmission Demand costs.

Reference 2) shows details of the Transmission Classification under the proposed 2024 Cost Allocation Methodology. Line 69 column (i) shows the Parkway Delivery Commitment Incentive costs of \$17.708 million being allocated to Dawn Parkway Transmission Demand.

Reference 3) describes the distance-weighted cost allocation used under the approved cost allocation methodology for Dawn Parkway Transmission Demands. The use of a "distance credit" as a result of the PDO and the allocation of the cost of the PDCI to Union South in-franchise rate classes is described.

Reference 4) describes how Enbridge Gas is proposing to change the allocation of Dawn Parkway transmission demand costs to in-franchise rate classes by assuming all in-franchise design day demands are served from Dawn in the derivation of the distance weighted allocation factor. Reference 4) also states that Enbridge Gas is proposing to eliminate the distance credit to in-franchise customers and allocate PDCI costs to both in-franchise and ex-franchise rate classes.

Reference 4) also states: *"Based on the 2024 Cost Allocation Study, the estimated distance credit benefit is approximately \$3 million compared to the PDCI costs of approximately \$18 million, which illustrates that the value of the PDO deliveries*

provided to in-franchise customers through the distance credit is not equal to the PDCI payment costs.” TCPL would like to understand these changes more thoroughly.

In Reference 5), a schedule is provided showing commodity-kilometres used as Dawn Parkway Allocation Units.

Question(s):

- a) Please explain how the approved allocation of PDCI payment costs solely to in-franchise customers described in Reference 3) was determined. Please also explain the rationale and history behind the arrangement. Provide any significant documentation about this allocation in previous OEB proceedings and provide references to OEB approval of this allocation of costs to in-franchise customers.
- b) Please explain the rationale for ex-franchise customers to now be allocated PDCI costs under the proposed methodology per Reference 1). Is the rationale solely related to the removal of the distance credit for in-franchise customers, or are there other reasons?
- c) Do ex-franchise customers realize any incremental benefit related to now being allocated a portion of PDCI costs under the proposed methodology, relative to the currently approved methodology? If not, please explain why not. If so, explain any incremental benefits.
- d) Please explain where the \$3 million distance credit benefit in the 2024 Cost Allocation study identified in Reference 4) comes from and provide a schedule showing its derivation. Is that value from the approved methodology or the proposed methodology or both?
- e) Please confirm the \$18 million PDCI cost in the 2024 Cost Allocation study identified in Reference 4) is the same shown in Reference 2) on line 69. Is that same value also present in the approved methodology? Please explain any differences in the line item between the approved and proposed methodology and provide schedules showing its derivation in both methodologies.
- f) Please provide a forecast of total PDCI costs during the price cap incentive rate-setting term from 2024-2028. Please explain and provide all assumptions relied on in developing the forecast.
- g) Please provide schedules showing the commodity-kilometres used in the 2024 Cost Allocation Study under both the approved methodology described in Reference 3) and the proposed methodology described in Reference 4) to allocate Dawn-Parkway demand costs to in-franchise and ex-franchise rate classes in the same format as Reference 5).

Response:

- a) The allocation of PDCI payment costs to Union South in-franchise customers was established in the Settlement Framework for Reduction of Parkway Delivery Obligation (PDO Settlement Framework) approved by the OEB in Union's 2014 Rates proceeding.¹ As described in the PDO Settlement Framework at page 4:

The costs of the PDCI will be allocated to rate classes and recovered in rates in the same manner as the PDO reduction costs are allocated to rate classes and recovered in rates as described in paragraphs B.1(e) ...²

... in the delivery rates of in-franchise customers served under the auspices of Rates M1, M2, M4, M5 Firm, M7 Firm, M9, M10, T1, T2 Firm, T3, and will be allocated to those rate classes using the 2013 Board approved Dawn-Parkway Design Day Demands reflected in the In-franchise Peak Day Demand allocation factor updated for the EB-2011-0210 Decision, ...³

The PDCI payment cost was allocated to Union South in-franchise customers because this customer group received a cost allocation benefit from the Parkway obligated deliveries in the allocation of Dawn Parkway transmission system costs in Union's 2013 Cost Allocation Study.⁴ The cost allocation benefit Union South in-franchise customers received, at the expense of direct purchase customers with a Parkway delivery obligation, was approximately equivalent to the PDCI payment cost at the time of the PDO Settlement Framework.

- b) The previous allocation of PDCI payment costs recognized that Union was in a Price Cap IR Framework for rate-setting purposes and base rates were set on the methodologies approved in Union's 2013 Cost Allocation Study. The addition of an incremental PDCI payment cost for recovery in the Price Cap mechanism, subsequent to the 2013 Cost Allocation Study, required an allocation methodology that was consistent with the underlying allocation of similar costs in base rates. Because Union South in-franchise rate classes received the cost allocation benefit of the Parkway obligation through cost allocation methodologies, Union South in-franchise rate classes were allocated the costs of the PDCI payment.

Within the 2024 Cost Allocation Study, Enbridge Gas has removed the distance credit for the Union South in-franchise rate classes. The removal of the distance credit recognizes that all rate classes benefit from the Parkway obligation as the Dawn Parkway System is physically smaller than it otherwise would be. Accordingly, Enbridge Gas has also allocated the PDCI payment costs in the same manner as

¹ EB-2013-0365, Settlement Framework, Appendix B, June 3, 2014.

² Ibid, p.4.

³ Ibid, paragraph B.1(e), p.3.

⁴ EB-2011-0210.

Dawn Parkway System costs. Additionally, with the proposed changes to the Dawn Station and Parkway Station cost allocation methodologies described at Exhibit 7, Tab 1, Schedule 4, the distance credit benefit is no longer reflective of the PDCI payment costs.

- c) Yes, ex-franchise rate classes receive a benefit of approximately \$3 million from eliminating the distance credit, as provided in part d). Ex-franchise rate classes also benefit from a Dawn Parkway System that is physically smaller than it otherwise would be. All customers benefit from reduced Dawn Parkway System facilities through lower Dawn Parkway System costs. If the Dawn Parkway System were physically expanded, ex-franchise rate classes would bear responsibility for a portion of the incremental cost.
- d) The approximately \$3 million distance credit benefit is calculated as the reduction to the allocated costs to in-franchise rate classes from changes in the allocators of the Dawn Station, Parkway Station and Dawn Parkway transmission functional classifications by assuming all in-franchise design day demands on the Dawn Parkway System are served from Dawn. Please see Table 1 for a summary of the impacts to in-franchise rate zones and ex-franchise rate classes.

Table 1
Dawn Parkway PDO Distance Credit Benefit

Line No.	Particulars (\$000s)	Allocated Revenue Requirement		
		Cost Study As Filed	Cost Study Updated for PDO Distance Credit	Difference
		(a)	(b)	(c) = (b-a)
	<u>Rate Zone</u>			
1	EGD	3,687,149	3,686,636	(513)
2	Union North	526,299	526,251	(48)
3	Union South	1,944,683	1,941,875	(2,808)
4	Ex-franchise	154,774	158,144	3,369
5	Total Net Revenue Requirement	<u>6,312,905</u>	<u>6,312,905</u>	<u>-</u>

- e) Confirmed. The PDCI payment cost of \$17.6 million⁵ (approximately \$18 million) does not change with the proposed allocation methodology.

⁵ Exhibit 7, Tab 2, Schedule 1, Attachment 6, page 3, line 69, updated March 8, 2023.

- f) The forecast of PDCI payment costs for the period 2024 to 2028 is provided in Table 2. The forecast includes assumptions on the timing and contract parameters for customer growth, which would impact final PDCI costs to the extent these assumptions differ on an actual basis. The forecast for PDCI also assumes that the firm exchange service used to facilitate a PDO shift in November 2022 expires at the end of the contract term in 2027. For more information on this firm exchange please see EB-2022-0133, Exhibit B, Tab 1, Schedule 1, Sections 1.6 and 3.1
