

BOMA INTERROGATORY #25

INTERROGATORY

Ref: Ibid, p7, paragraph 6

Why is it necessary for EGD to receive its delivery volume to the service area through additional peaking service, to replace deliveries to the franchise area by Ontario T-Service customers opting to move to Dawn delivery service? Please explain fully. What notice does EGD require from migrant customers prior to their switching to Dawn delivery service? What has been the incremental cost to ratepayers (in 2017) and forecast in 2018 to backfill the missing supply with peaking service?

RESPONSE

Volumes received under the Dawn T-Service option will require transportation to get the gas from Dawn to the franchise area. Using existing contracted capacity from Dawn to Parkway on the Union system and from Parkway to CDA on the TCPL system will leave a supply deficiency in the CDA on Peak Day in the future.

As part of the Dawn Access Consultative, EGD asked Direct Purchase customers to express their interest in converting their pools from OTS/WTS to DTS with the proviso that conversions would only take place after necessary changes were made to Entrac and that enhancements were made to the TCPL system. Assuming these upgrades were complete, the conversion would take place upon the individual customers' renewal date on or after November 1, 2017.

Because DTS is not becoming effective until November 1, 2017 there was no impact on the forecasted peaking service requirement in 2017 and as described in response to Board Staff Interrogatory # 8 (Exhibit I.D1.EGDI.STAFF.8) there was a slight reduction in the forecasted peaking requirement in 2018 versus 2017.
