

Cabarrus County Pipeline Modernization Project

Project summary

The project involves installing approximately eight miles of new pipeline between Stirewalt Road in Kannapolis and Eva Drive in Concord, along mostly existing Enbridge Gas rights-of-way.

Proposed timeline

Safety

Our system is monitored 24 hours a day, 7 days a week, using sophisticated computer and telecommunications equipment at gas system control centers.

Reliability

Natural gas ensures reliable energy for over 155,000 Enbridge Gas customers in the region.

Experience

Enbridge Gas operates 13,000 miles of pipelines in North Carolina and has a proven safety track record.

Why are you building this pipeline?

The project supports safety, compliance and long-term planning by building a new pipeline.

This will reduce operating pressure on a legacy pipeline once the new one is in service. This will allow Enbridge Gas to continue meeting federal regulations while balancing future system capacity needs.

How safe are pipelines?

From construction through operations, safety is a core value. Enbridge Gas maintains construction and operating policies and procedures that adhere to state and federal safety requirements. These requirements provide specific direction for inspection, testing, operation, preventive maintenance, repair and vigilant patrols of facilities. Local Enbridge Gas employees will operate and maintain the pipeline once it is in service.

What about environmental impacts?

Enbridge Gas is committed to being a good steward of the environment and following all permit specifications. The new pipeline will parallel the existing right of way for most of the project, which will help reduce potential environmental impacts.

How will you reduce impacts to recreational areas?

Some construction activities will occur near or within parks and other recreational areas, but impacts will be temporary. We will work closely with local governments and parks departments to communicate construction impacts and fully restore all affected areas once construction is complete.
