

Whitt Town to Somerset Pipeline Integrity Project

Project summary

The project involves installing approximately four miles of new pipeline southwest of Roxboro between Whitt Town and Somerset along mostly existing Enbridge Gas rights-of-way.

Proposed timeline

Safety

Our system is monitored 24 hours a day, 7 days a week, using sophisticated computer and telecommunications equipment at gas system control centers.

Reliability

Natural gas ensures reliable energy for over 440,000 Enbridge Gas customers in the region.

Experience

Enbridge Gas operates 24,000 miles of natural gas lines and pipelines in North Carolina and has a proven safety track record.

Why are you building this pipeline?

The project supports safety, compliance and long-term planning by building a new pipeline alongside an existing pipeline. This will allow Enbridge Gas to continue meeting federal safety regulations while balancing future system needs.

How safe are these projects?

From construction through operations, safety is a core value. Enbridge Gas maintains construction and operating policies and procedures that adhere to state and federal safety requirements. These requirements provide specific direction for inspection, testing, operation, preventive maintenance, repair and vigilant patrols of facilities. Local Enbridge Gas employees will operate and maintain the pipeline once it is in service.

What about environmental impacts?

Enbridge Gas is committed to being a good steward of the environment and following all permit specifications. The new pipeline will parallel existing utility right-of-way for most of the project, which will help reduce potential environmental impacts.
