

2021/2022 Storage Enhancement Project

Notice of Project Commencement

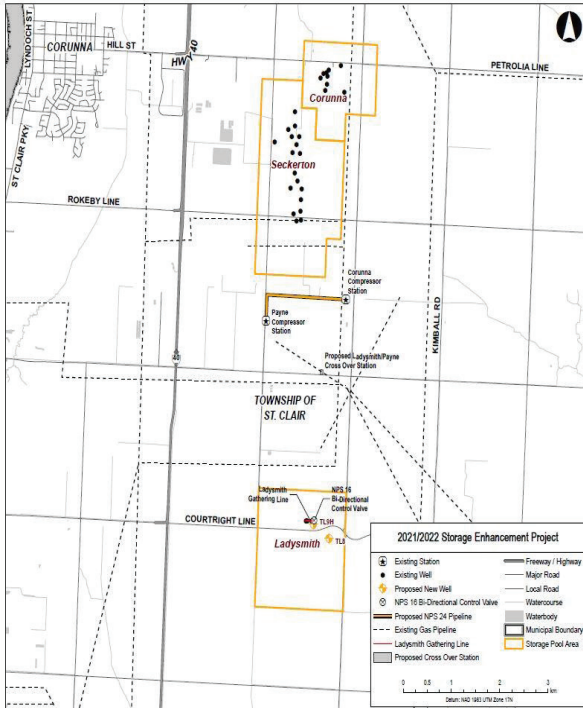

Project Overview

To address increasing demand for natural gas across Ontario, Enbridge Gas is proposing to undertake a Storage Enhancement Project at its natural gas storage facilities in St. Clair Township. The Project will allow Enbridge Gas to store additional natural gas and will increase the deliverability of Enbridge Gas's storage operations.

The Project involves increasing the maximum operating pressure in three existing storage pools (Ladysmith, Corunna and Seckerton), and:

- Re-entering an existing well and converting it to a horizontal well, drilling an observation well.
- Upgrading an existing natural gas gathering pipeline.
- Installation of a bi-directional valve and station piping at an existing station.
- Constructing approximately 2.2 km of natural gas pipeline to connect the Payne Storage Pool to the Corunna Compressor Station located on Tecumseh Road, in St. Clair Township, Ontario.

The location of the Storage Enhancement Project and the preferred location of the new pipeline is shown on the map below. Construction would begin in 2021.

Preparation of an Environmental Report

AECOM has been retained by Enbridge Gas to prepare an environmental report to assess the potential environmental and socio-economic effects that may result from the project, and outline plans for avoiding and/or mitigating any effects where possible. The environmental report will accompany a leave-to-construct application that will be submitted to the Ontario Energy Board (OEB) in the fall of 2020. OEB review and approval is needed to undertake construction.

For questions regarding the environmental report or the project, please contact:
